CptS 322 Software Engineering Principles I

Spring 2017

Project Milestone 8
(Due Friday/May 5th, 2017 on Blackboard & Github)

Milestone Description:

After implementation and testing, which together constitute the framework activity of *construction*, now we move to the framework activity of *deployment*. For this milestone, your team will demonstrate a functioning prototype of your software.

A fully working product is not expected. Your team does not have to demonstrate the full set of functional features in the prototype. However, you need to show that your software works with respect to at least one of use cases that you have developed during requirements modeling.

Demonstration:

Make an appointment with TA for demonstrating your prototype during *April 24th through May 5th*. Bring your computer to TA and show him the use scenarios for the use cases your software can function for.

What to submit:

A single PDF to Blackboard, where you:

- Describe the instruction to using your software for the demonstrated use cases.
- For each use case demonstrated, include a screenshot of your software when running in that use case.

In addition,

- Have all your code committed to your project repository on Github.
- Include in the README file on Github the same usage instructions you included in the PDF above.
